

GO enrichment results

cell–cell adhesion via plasma–membrane adhesion molecules

leukocyte migration

wound healing

negative regulation of response to wounding

negative regulation of response to external stimulus

regulation of lipid localization

response to corticosteroid

response to peptide

regulation of leukocyte migration

regeneration

negative regulation of cell adhesion

regulation of immune effector process

extracellular matrix organization

response to lipopolysaccharide

plasma lipoprotein particle clearance

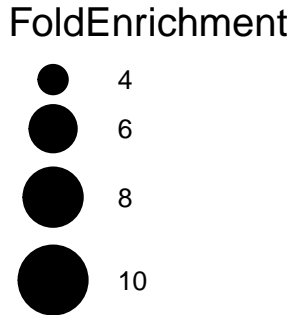

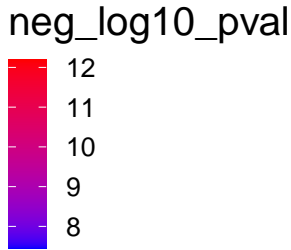

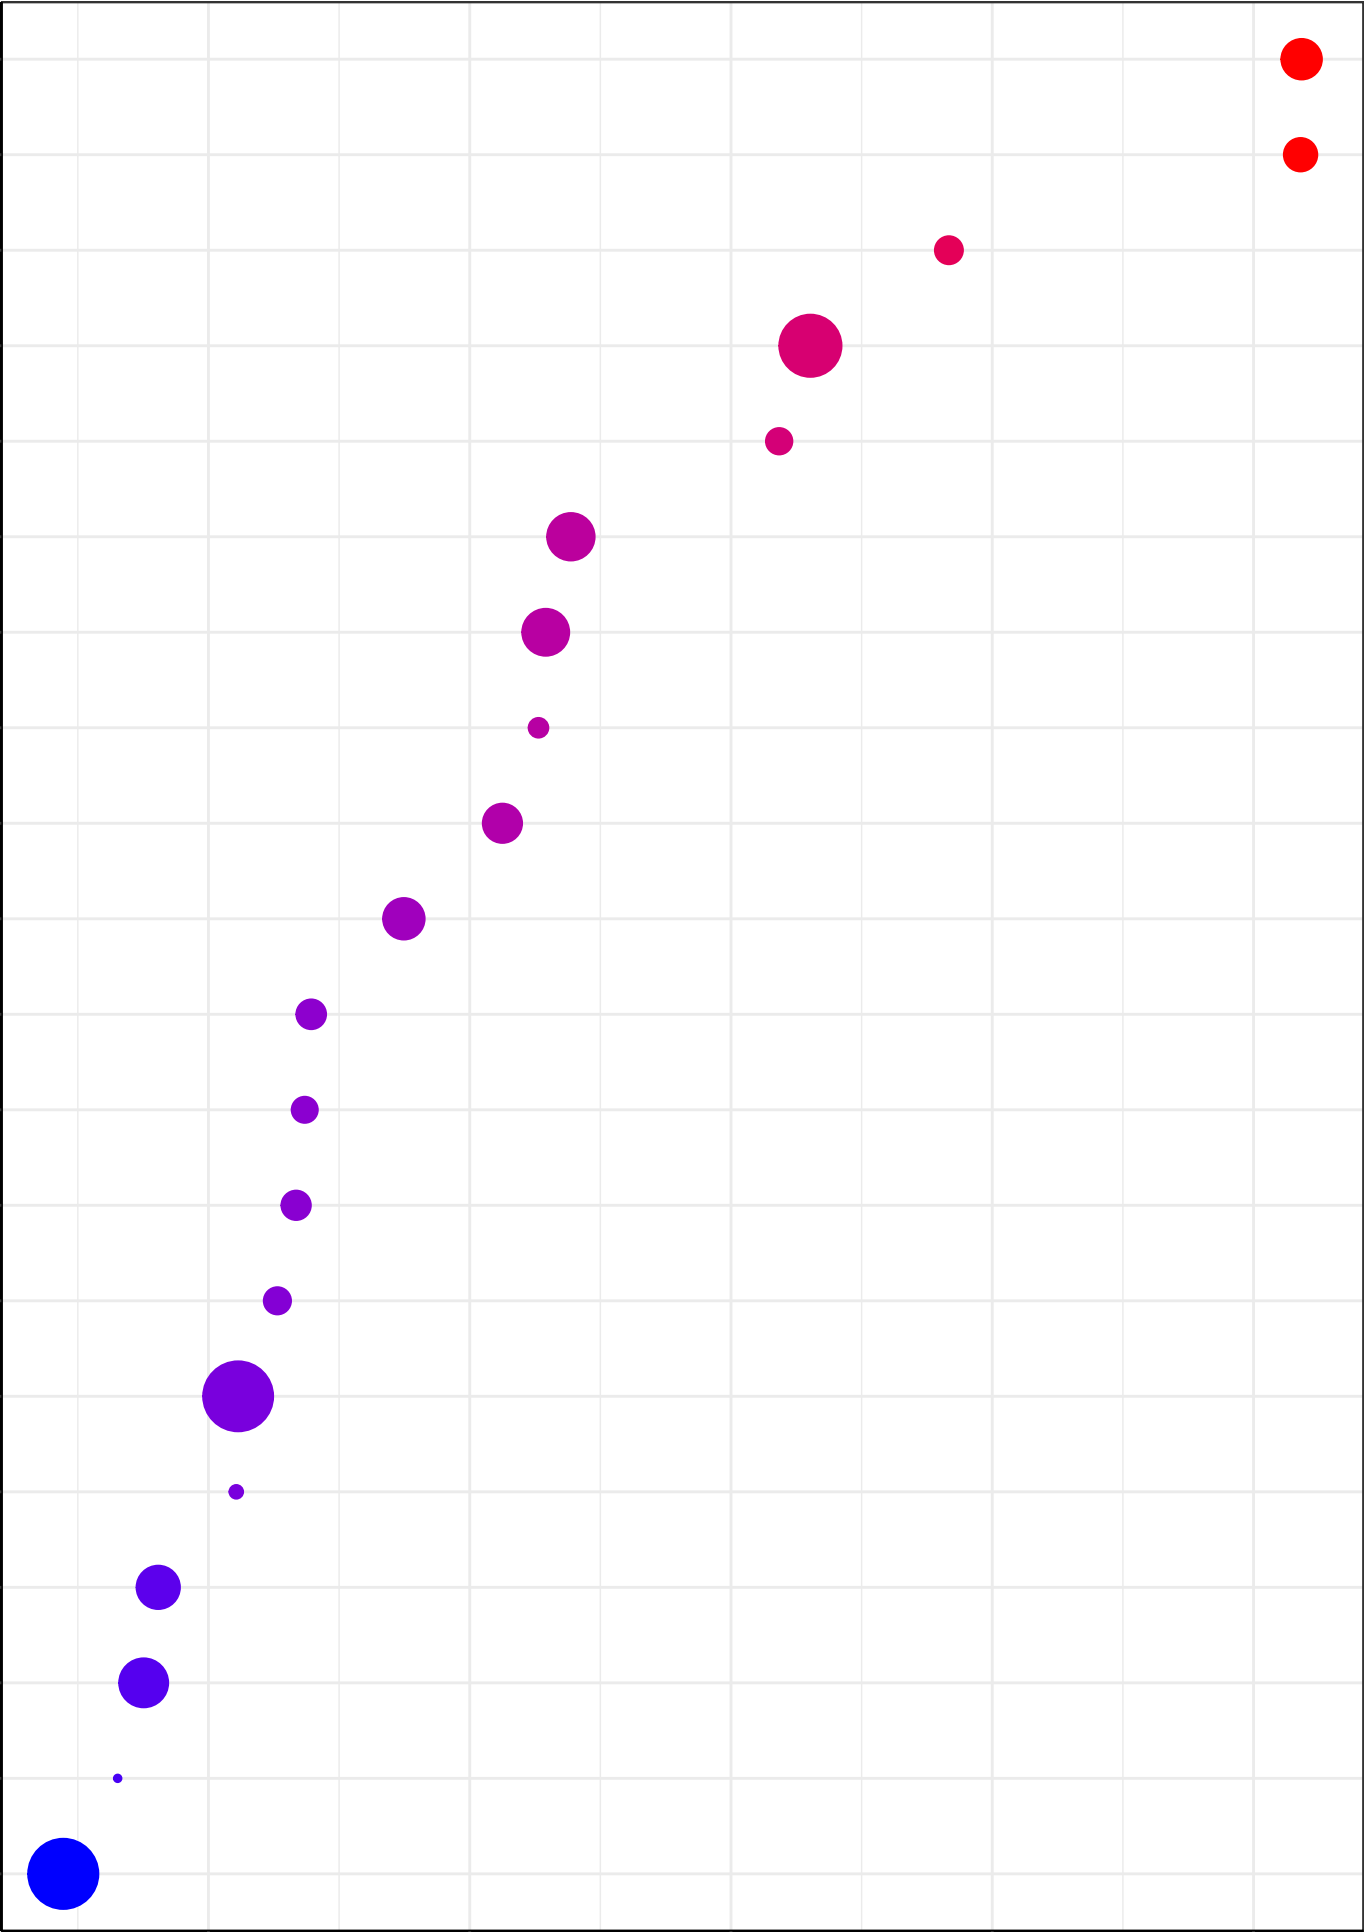

positive regulation of MAPK cascade

entry into host

regulation of lipid transport

cytokine–mediated signaling pathway

negative regulation of blood coagulation

$-\log_{10}(\text{Pvalue})$
